mymeter

Empower and Conserve with Better Water Data

Give your customers the ability to get information about their usage, make decisions based on their data, and pay their bill—all in one location. MyMeter delivers a better web and mobile experience, with any customer information system (CIS).

Drive behaviors with real data

With the right data, your customers are empowered to conserve, save, and use water wisely. MyMeter provides access to meter data through a web portal or a mobile app. With user-specific information, customers can see their usage (AMI or monthly) and make decisions based on their consumption.
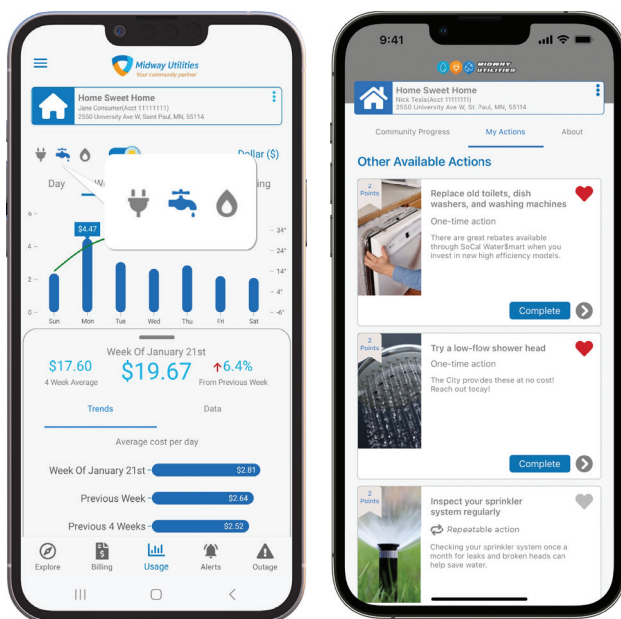

Provide a native app, not a wrap

Unlike other providers who render their services as a web page onto a mobile device, we've built a native mobile application to provide everything your customer can do on the web, in an easy-to-use, native app for Apple and Android.

Brand it Your Way

Our standard app is available in the app stores for easy customer access. Users simply choose their utility, and they're ready to go. Alternatively, we can give your utility a unique presence in both the Android and Apple app stores to create a seamless customer experience.

Offer More Features

Push notifications

Bill pay and bill presentment

Water leak notifications

Water quality reporting and notifications

Irrigation information and alerts

Service charges and service requests

Usage analysis

Consumption benchmarking & comparison

High bill alerts

Plus, all the features provided by the MyMeter desktop site

A true SaaS delivery means your software is always current with the latest technology release.

A comprehensive suite of software options meets the needs of utilities of all types and sizes.

The industry's most robust AMI data presentation engine, because meter data is at the heart of all customer service.

A team of experts who love their work and take pride in delighting clients
